PASSED AUDITS (34)	Hide
Eliminate render-blocking resources	^
Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all not JS/styles. <u>Learn more</u> . FCP <u>LCP</u>	n-critical
NEXT. Use the `next/script` component to defer loading of non-critical third-party scripts. Learn more.	
Properly size images	^
Serve images that are appropriately-sized to save cellular data and improve load time. <u>Learn more</u> .	
NEXT., Use the `next/image` component to set the appropriate `sizes`. <u>Learn more</u> .	
Defer offscreen images	^
Consider lazy-loading offscreen and hidden images after all critical resources have finished loading to lower time interactive. <u>Learn more</u> .	to
NEXT., Use the `next/image` component instead of ` <img/> ` to automatically lazy-load images. <u>Learn more</u> .	
Minify CSS	^
Minifying CSS files can reduce network payload sizes. <u>Learn more</u> . <u>FCP</u> <u>LCP</u>	
Minify JavaScript	^
Minifying JavaScript files can reduce payload sizes and script parse time. <u>Learn more</u> . FCP <u>LCP</u>	
Reduce unused CSS	^

about:blank 4/23

Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. <u>Learn more</u>. FCP [LCP]

Consider setting up `PurgeCSS` in `Next.js` configuration to remove unused rules from stylesheets. <u>Learn more.</u>

Reduce unused JavaScript — Potential savings of 108 KiB

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. <u>Learn more</u>. [LCP]

NEXT. Use `Webpack Bundle Analyzer` to detect unused JavaScript code. Learn more

URL	Transfer Size	Potential Savings
pages/_app-d4f829bb59859860.js (walletkeeper.vercel.app)	149.9 KiB	108.5 KiB

Efficiently encode images

Optimized images load faster and consume less cellular data. Learn more.

NEXT. Use the `next/image` component instead of `<img>` to adjust image quality. Learn more.

Serve images in next-gen formats

Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. <u>Learn more</u>.

NEXT. Use the `next/image` component instead of `<img>` to automatically optimize image format. Learn more.

Enable text compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. <u>Learn</u> <u>more</u>. FCP (LCP)

NEXT. Enable compression on your Next.js server. Learn more.

Preconnect to required origins

## Warnings:

• A `A `k rel=preconnect>` was found for "https://fonts.googleapis.com" but was not used by the browser. Only use `preconnect` for important origins that the page will certainly request.

about:blank 5/23

• More than 2 `link rel=preconnect>` connections were found. These should be used sparingly and only to the most important origins.

	Consider adding `preconnect` or `dns-prefetch` resource hints to establish early connections to important third-party origing Learn more. FCP (LCP)	ins.
	Initial server response time was short — Root document took 40 ms	^
	Keep the server response time for the main document short because all other requests depend on it. <u>Learn more</u> . FCP	
	URL Time Sper	nt
	https://walletkeeper.vercel.app 40 m	ıs
	Avoid multiple page redirects	^
	Redirects introduce additional delays before the page can be loaded. <u>Learn more</u> . FCP (LCP)	
0	Preload key requests	^
	Consider using ` <li>k rel=preload&gt;` to prioritize fetching resources that are currently requested later in page load. <a href="Learn"><u>Learn</u></a> <a href="More"><u>More</u></a>. <a href="FCP">FCP</a> <a href="LCP">LCP</a></li>	
	Use HTTP/2	^
	HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. <u>Learn more</u> .	
	Use video formats for animated content	^
	Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more [CP]	
	Remove duplicate modules in JavaScript bundles	^
	Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity.	
	Avoid serving legacy JavaScript to modern browsers — Potential savings of 6 KiB	^

modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature

Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for

about:blank 6/23

detection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. <u>Learn</u> <u>More</u> (TBT)

URL		Potential Savings
pages/_app-d4f829bb59859860.js (walletkeeper.vercel.app)		5.7 KiB
_app-d4f829bb59859860.js:1	Array.isArray	

Preload Largest Contentful Paint image

^

Preload the image used by the LCP element in order to improve your LCP time. Learn more. [LCP]

NEXT. Use the `next/image` component and set "priority" to true to preload LCP image. Learn more.

Avoids enormous network payloads — Total size was 302 KiB

^

Large network payloads cost users real money and are highly correlated with long load times. Learn more. [LCP]

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

# ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Hide

The page has a logical tab order	^
Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. <u>Learn more</u> .	
Interactive controls are keyboard focusable	^
Custom interactive controls are keyboard focusable and display a focus indicator. <u>Learn more</u> .	
Interactive elements indicate their purpose and state	^
Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. <u>Learn more</u> .	
The user's focus is directed to new content added to the page	^
If new content, such as a dialog, is added to the page, the user's focus is directed to it. <u>Learn more</u> .	
User focus is not accidentally trapped in a region	^
A user can tab into and out of any control or region without accidentally trapping their focus. <u>Learn more</u> .	
Custom controls have associated labels	^
Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. Learn more.	
Custom controls have ARIA roles	^
Custom interactive controls have appropriate ARIA roles. <u>Learn more</u> .	
Visual order on the page follows DOM order	^
DOM order matches the visual order, improving navigation for assistive technology. <u>Learn more</u> .	
Offscreen content is hidden from assistive technology	^
Offscreen content is hidden with display: none or aria-hidden=true. <u>Learn more</u> .	

about:blank 11/23

O HTML5 landmark elements are used to improve navigation

Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more.

These items address areas which an automated testing tool cannot cover. Learn more in our guide on <u>conducting an accessibility</u> <u>review</u>.

PASSED AUDITS (17) Hide

[aria-\*] attributes match their roles

Each ARIA `role` supports a specific subset of `aria-\*` attributes. Mismatching these invalidates the `aria-\*` attributes. <u>Learn more</u>.

[aria-hidden="true"] is not present on the document <body>

Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true" is set on the document `<body>`. Learn more.

[role]s have all required [aria-\*] attributes

Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more.

[role] values are valid

ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more.

[aria-\*] attributes have valid values

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more.

[aria-\*] attributes are valid and not misspelled

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more.

Buttons have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn more</u>.

Form elements have associated labels

about:blank 12/23

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more. [user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5. Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more. [aria-hidden="true"] elements do not contain focusable descendents Focusable descendents within an `[aria-hidden="true"]` element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn more. The page contains a heading, skip link, or landmark region ^ Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. Learn more. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn more. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more. <html> element has a [lang] attribute If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more. <html> element has a valid value for its [lang] attribute Specifying a valid BCP 47 language helps screen readers announce text properly. Learn more. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn more.

about:blank 13/23

Heading elements appear in a sequentially-descending order

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. <u>Learn more</u>.

NOT APPLICABLE (27) Hide

Accesskey] values are unique  Accesskeys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more.  button, Link, and menuitem elements have accessible names  When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.  ARIA input fields have accessible names  When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.  ARIA meter elements have accessible names  ARIA meter elements have accessible names  ARIA progressbar elements have accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.  ARIA progressbar' element doesn't have an accessible names  ARIA progressbar' element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. ARIA toggle fields have accessible names

When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .
ARIA tooltip elements have accessible names
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .
O ARIA treeitem elements have accessible names
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u> .
<dl>'s contain only properly-ordered <dt> and <dd> groups, <script>, <template> or <div> elements.</td></tr><tr><td>When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. <u>Learn more</u>.</td></tr><tr><td>O Definition list items are wrapped in <dl> elements</td></tr><tr><td>Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. <u>Learn more</u>.</td></tr><tr><td>O [id] attributes on active, focusable elements are unique</td></tr><tr><td>All focusable elements must have a unique `id` to ensure that they're visible to assistive technologies. Learn more.</td></tr><tr><td>O ARIA IDs are unique</td></tr><tr><td>The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. <u>Learn more</u>.</td></tr><tr><td>No form fields have multiple labels</td></tr><tr><td>Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. <u>Learn more</u>.</td></tr><tr><td>o <frame> or <iframe> elements have a title</td></tr><tr><td>Screen reader users rely on frame titles to describe the contents of frames. <u>Learn more</u>.</td></tr><tr><td>Image elements have [alt] attributes</td></tr></tbody></table></script></dd></dt></dl>

about:blank 15/23

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. Learn more. <input type="image"> elements have [alt] text When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. Learn more. Lists contain only elements and script supporting elements (<script> and <template>). Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. Learn more. List items () are contained within or parent elements Screen readers require list items (`') to be contained within a parent `' or `' to be announced properly. Learn more. The document does not use <meta http-equiv="refresh"> Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. Learn more. <object> elements have alternate text Screen readers cannot translate non-text content. Adding alternate text to `<object>` elements helps screen readers convey meaning to users. Learn more. No element has a [tabindex] value greater than 0 A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. Learn more. Cells in a element that use the [headers] attribute refer to table cells within the same table. Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. Learn more. elements and elements with [role="columnheader"/"rowheader"] have data cells they describe. Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. Learn more.

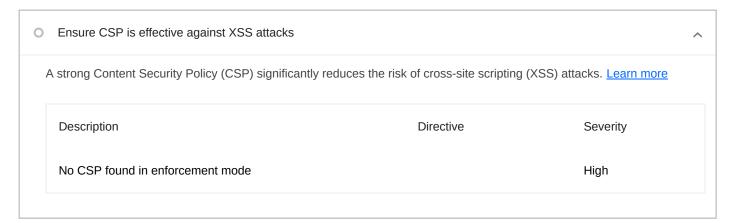

about:blank 16/23

[lang] attributes have a valid value
 Specifying a valid BCP 47 language on elements helps ensure that text is pronounced correctly by a screen reader. Learn more.
 <video> elements contain a <track> element with [kind="captions"]
 When a video provides a caption it is easier for deaf and hearing impaired users to access its information. Learn more.

# **Best Practices**

#### TRUST AND SAFETY

### **GENERAL**

about:blank 17/23

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. <u>Learn more</u>.

URL Map URL

...pages/ app-d4f829bb59859860.js (walletkeeper.vercel.app)

Large JavaScript file is missing a source map

PASSED AUDITS (12)

#### **Uses HTTPS**

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding <u>mixed content</u>, where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more</u>.

Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. Learn more.

Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. <u>Learn more</u>.

Avoids front-end JavaScript libraries with known security vulnerabilities

Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. **Learn more**.

Allows users to paste into password fields

Preventing password pasting undermines good security policy. Learn more.

Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. Learn more.

about:blank 18/23

^

Serves images with appropriate resolution Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. Learn more. Page has the HTML doctype Specifying a doctype prevents the browser from switching to quirks-mode. Learn more. Properly defines charset A character encoding declaration is required. It can be done with a `<meta>` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. Learn more. Avoids deprecated APIs Deprecated APIs will eventually be removed from the browser. Learn more. No browser errors logged to the console Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. Learn more No issues in the Issues panel in Chrome Devtools Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.
